**Executive Summary**
Alex Fox 8001199641
CS 472 - 1001

This is a status report for the scottyab/rootbeer project. Here is a chart detailing the contributions to the project.

From this chart you can see that we have had consistent contribution from the grey employee in the recent months. You can also see that the red employee started off making good contributions, but has not been up to date lately. I personally think that by looking at this chart we can deal with losing anyone who has not contributed in the last 40 months. If they are still on the project they are not doing their part. Additionally I think we should look into the longevity of our workers. It seems like no one is contributing to the project for more than 2 to 3 years and this could be a problem. It is good to keep a consistent base.

I think the commands that I found the most helpful for this lab were the branch switching commands. It is a simple way to work on many issues at once as switch fast.
